HATCHES & VALVES

IN-LINE VENT VALVES

In-line vent valves are used to relieve pressure through the vent lines. By omitting the vacuum side of the valve, the possibility of two-way flow is eliminated. Valves are lined and trimmed with plastic where moving parts or surfaces may become fouled by crude gases or materials.

FLAME ARRESTORS

Aluminum vent stack flame arrestors prevent flame propagation by absorbing and dissipating heat using spiral wound crimped ribbon flame cells. In-line flame arrestors are available upon request.

THIEF HATCHES

Thief hatches (pressure relief valves) are available in several pressures and vacuum relief settings as well as iron and aluminum castings.

MUSHROOM VENTS

Mushroom vents are 20 in. aluminum roof assemblies that allow air circulation inside of the tank and keep birds and other debris from entering the tank.

VALVES/PUMPS

ATC can provide ball or gate valves for your municipal or oilfield applications. Please consult our sales team for more information regarding your valve or pump requirements.
